

GOV.UK Verify's sandbox environment listing service

Overview

This sandbox environment enables organisations to conduct initial testing projects so that they can achieve an understanding of how to leverage GOV.UK Verify and trustworthy digital identities within their organisations. Any organisation that wants to test and learn about Verify can do so by engaging with a self-certified hub provider which can be seen in the list below. Self-certification means that these providers have reached a minimum set of standards for Verify and therefore have a higher level of trust associated with their Verify service offering.

- GOV.UK Verify sandbox environment self-certification process is documented in this [whitepaper](#), published on the OIX website.
- GOV.UK Verify sandbox environment self-certification requirements can be found here in [pdf format](#) and here as a [Word Doc](#).

The Verify sandbox certified hub providers

The table below shows the organisations that have self-certified compliance to the Verify sandbox requirements. The Verify team has reviewed their self certification before listing.

Company Name	Status	Link to Company Services	Self-Certification Document
Sitekit	Complete	Sitekit Overview	Sitekit Self-Certification
Safran	Complete	Safran Overview	Safran Self-Certification
